

International Workshop “Extension of INTERMAGNET Russian Segment: Prospects and Challenges”, Russia, October-November 2013

As a result of the proposed workshop the decision on deployment locations of several new INTERMAGNET magnetic observatories on the territory of Russia will be carried out with a special focus on Arctic region. It will provide a great contribution to geomagnetic field study filling the big spatial gap of the present global geomagnetic observatory network. The transition of the Russian-Ukrainian observatories and data centre to realtime data transmission will widen applications of the data collected especially in space physics domain.
