

Johanna Salminen

FINLAND

I was awarded an M.Sc. in 2004 as a geophysics major at the University of Helsinki (Finland), where I continued my studies and defended my Ph.D. thesis in 2009. The topic of my Ph.D. thesis is Precambrian supercontinents using paleomagnetic methods. I did post doctoral training during 2010-2012 at Yale University (USA). There I continued supercontinent studies using paleomagnetic methods and broadened my scope to geochemistry. I returned to the University of Helsinki in spring 2012 and continued Precambrian supercontinent research and also started magnetostratigraphic and environmental magnetism studies on Cretaceous to Neogene sedimentary rocks from Africa and Eurasia. I love field work, which I have had the privilege of doing in Finland, Russia, Brazil, Angola, Namibia, South Africa and China with inspiring colleagues.

In my current position as a doctoral researcher at the University of Helsinki I also participate to teaching and student supervision in the Department of Physics and the Department of Geography and Geosciences.
